## **DETAILED ACTION**

### ***Claim Objections***

Claims 4-27 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from another multiple independent claim. See MPEP § 608.01(n). Accordingly, the claims 4-27 not been further treated on the merits.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lazarev (US 2003/0161022) in view of Sato (US 6,833,957). Examiner notes the inventive entity for the Lazarev reference is not the same as the current application. The prior art reference includes inventor Sulimov and the current application includes inventor Palto. Both inventors are mutually exclusive.

Regarding claim 1, Lazarev teaches an interferential optical filter comprising multiple layers having at least one electro-optical material, the electro-optical material is anisotropic and made from at least one aromatic organic material, molecules or fragments of molecules of which have a flat structure and at least part of the layer has a crystalline structure with an intermolecular spacing of  $3.4 \pm 0.2$  Angstroms along one of the optical axes (abstract). Lazarev lacks the claimed refractive indexes. Sato teaches a multilayer filter responsive to an external electric field (abstract) wherein the refractive index and the thickness of each layer and their combination are selected such as to provide an interference extremum in at least one region of the spectrum for at least one polarization of incident light (abstract). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have the Lazarev invention include the refractive indexes and layers of Sato for the purpose of narrowing the transmission band of the optical filter.

Regarding claim 2, Lazarev teaches the anisotropic electro-optical material is treated with ions of two and three valence metals (claim 3).

Regarding claim 3, Lazarev teaches the molecules of the aromatic organic material contains heterocycles (claim 4).
